Resgrid-ESO Sync Quick Reference

Staff Training Guide & System Operation Overview

Data Flow Process

1. **Call Created** in Resgrid dispatch
2. **System Detects** call via live connection
3. **Data Extracted** from Resgrid (units, times, address)
4. **XML Generated** in ESO format
5. **File Uploaded** to ESO servers
6. **Results Logged** to Google Sheets

Processing Time: Complete cycle typically takes less than 2 seconds

Google Sheets Overview

Call Data Tab (37 Columns)

- Call Received Time, Emergency Call ID
- Priority, Description, Responding Units
- Address components, GPS coordinates
- Unit timing data (dispatch, arrival, cleared)
- ESO Upload Status, Generated XML

Logs Tab

- System startup and connection events
- Call processing activities
- Upload success/failure notifications
- Error messages and warnings

What It Does

Automatic Integration: Connects Resgrid dispatch system to ESO reporting with zero manual intervention.

Key Functions

- Detects new emergency calls instantly
- Extracts complete call data (37 fields)
- Generates ESO-compliant XML files
- Uploads to ESO servers automatically
- Logs everything to Google Sheets

System Status Indicators

🟢 **Green:** System operating normally

🟡 **Yellow:** Minor issue, system still functional

🔴 **Red:** System error, requires attention

Check System Health

```
Health URL: [deployment-url]/health
```

Monitor Operations

- Google Sheets "Logs" tab for system events
- Google Sheets "Call Data" tab for processed calls
- Check "ESO Upload Status" column for success/failure

Troubleshooting

If Calls Not Processing

1. Check system health endpoint
2. Verify Resgrid connection in logs
3. Confirm API credentials valid
4. Check Google Sheets for error messages

Upload Failures

- ESO Upload Status shows "Failed"
- Check SFTP credentials
- Verify network connectivity
- System will automatically retry

> **Support:** Check Google Sheets Logs tab for detailed error messages and system status

Key Features

Reliability

- Live connection + backup polling
- 4-strategy SFTP connection approach
- Automatic retry on failures
- Complete operational logging

Data Quality

- GPS geocoding for addresses
- Pacific Time standardization
- XML integrity verification
- Complete audit trail

Monitoring

- Real-time health checks
- Performance metrics tracking
- Comprehensive Google Sheets logging
- Error categorization and reporting

Call Processing Details

What Gets Captured

- **Basic Info:** Call ID, nature, priority, address
- **Units:** All responding units with individual timings
- **Times:** Dispatch, en route, arrival, patient contact
- **Location:** Full address, GPS coordinates
- **Patient:** Name, DOB, contact information
- **Closure:** Call closed time, final unit status

XML File Structure

- CadIncident root element
- Complete incident details
- Individual unit entries with times
- Patient information
- GPS coordinates and addresses
